Message : A quest to interface proper medical knowledge library(s) such as the NIH.gov onto medical care.

Patients should be able to open share upon a doctor any published research contained in that library. This should made a law that remands the doctor to be required to receive this in view.

Such is 3 research papers on a subject thats showe my need of a doctor side of a patient centered relationship in my case - and has been very disturbing to fatal to follow the course of doctor ignorance on this subject and allow doctor provider care to remain inadequate to the circumstances.

Information immersion:

Patient portal should provide such a bridge to such newly advanced and research findings into better understanding in upward progressive care.
